June 20 & 21, 2026

The Directors of St. Teresa's Mundy Pond Corporation, your corporation, sincerely thank you for your ongoing generous donations to the Heating and Electrical Upgrade campaign.

With your continued financial support, we are in a position to move forward with the tendering process for this important project. Through our consultant, the tendering documents were issued this past week. If an acceptable response is received, we anticipate moving ahead with the project in early July, with completion by the end of September 2026. The upgraded heating system will be radiant heating (electrical), which offers enhanced efficiency, lower operational costs, and greater environmental sustainability. This type of upgrade will allow the parish to save on fuel, insurance, and maintenance costs.

We remind everyone that we are still tallying donations to help raise the funds needed for the new Heating system. Your continued support is vital to keeping our church warm and welcoming. If you are able, please consider donating today to help us reach our goal—every contribution, large or small, makes a meaningful impact. Thank you for your continued generosity!

Here is a photo of a comparable radiant-heater fixture, which will be installed in the main section of the church.
